

Install octagon gable window

1. Locate where you want to place the window. Cut a 14-1/8" octagonal opening in siding where there isn't a gable stud. Tip: use inner portion of window to trace correct size on siding. Caulk all sides of the window on the flange that will contact the siding. Install window to the exterior of the siding using short white screws provided. Place screws equally around perimeter.

Replacement Parts List:

White sheet metal screws

Use and Care Information:

Shed siding must be painted prior to installation.

Using exterior caulking, caulk flange to siding along all sides to prevent water from penetrating interior.
